

National Severe Weather Warning Service

Chief Forecasters Assessment

A cold, unstable north to northwesterly flow will persist across the region overnight, feeding in further wintry showers, albeit the intensity of these decreasing with time. As surface temperatures fall below freezing this means a risk of icy stretches.

The Met Office have issued a **Yellow Warning of Ice**

Valid from **18:00 on Wed, 06th Feb 2013** until **11:00 on Thu, 07th Feb 2013**

Icy stretches are expected to develop this evening and tonight across the north and northeast of Scotland including the Northern Isles. Further hail, sleet and snow showers are expected with slight deposits of snow near sea level, but perhaps a fresh 2-5cm of snow over some inland and upland areas. Where showers have left surfaces wet or with slushy snow, ice will readily form, especially on untreated surfaces.

The public should be aware of this ice risk on roads and pavements.
